Objective

Attain key team leadership position in the Quality and TS fields that will use my experience with processes, people, procedures and cost reduction for the betterment of the overall organization as well as the employee

- Successfully lead plant efforts for attaining QS and TS Quality awards
- Assisted in lowering costs, including scrap and rework, by compiling data and worked with fellow team members on root cause analysis and corrective action
- Lead and trained internal audit teams on QS and TS procedures and proper application
- Mentored Staff level employees as well as hourly employee on new quality systems and procedures
- Assisted customers in achievement of Quality Awards
- Maintained and managed plant internal Quality Operating Systems

Experienced in the following areas

Leadership	Worked closely hourly as well as management employees in the attainment of several Quality awards. Successful in using team approach style of management in directing and implementing changes required in quality system at several different employers
Multi-Tasking	Led two separate plants in maintaining and improving TS Compliance. This effort includes working closely with several different quality managers as well as different disciplines between the plants as well as two different labor unions and plant cultures
Cost Savings	Implemented daily scrap and repair audit systems, which brought together various management and hourly employees, to physically review all scrap and repair parts ran the previous days. This review generated problem-solving activities for the top five issues until resolved. As a results many long standing cost issues were successfully resolved due to improve focus as well as resource assignments
Customer Interface	Successful interface with customers on quality, APQP as well as PPAP and FMEA. Developed close working relationship with quality engineers, hourly inspectors as well as upper management at various supplier and customer locations

Process Improvement

Worked closely with plant Manufacturing as well as engineering on problem resolution. These efforts included data collection, managing various studies in root-cause investigations, cause and effect reviews. Net results were reductions in plant scrap and rework efforts.
