OGP MULTISENSOR EXPERTISE MEETS TRADITIONAL CMM RELIABILITY
FlexPointTM Multisensor Coordinate Measuring Systems from OGP® combine the accuracy and stability of a traditional CMM transport with the high capability and throughput of a multisensor system. Whether its large prismatic parts, parts with small features, or parts with complex surfaces, FlexPoint Multisensor CMMs will solve any measurement challenge. The patented VersaFlexTM multisensor head offers up to three simultaneously available sensors on an articulating probe head. With multiple sensors simultaneously available, there is no down time while individual sensors are exchanged from a change rack, and no need to recalibrate each time a sensor is used.
