

UJIGAMI™
BY TUTELAR TECHNOLOGIES INC.

UJIGAMI SOFTWARE

Ujigami enhances plant floor equipment with real-time intelligence, interconnectivity, active controls, and ERP/MRP transactions to integrate the entire manufacturing process. Ujigami's dock-to-dock plant floor capability greatly enhances your product offering and solves your manufacturing challenges - freeing capital to re-invest in the company.

UJIGAMI SOFTWARE FEATURES

- ✔ Real-time mistake-proofing and active controls
- ✔ Complete part, lot, and process data collection and traceability
- ✔ Schedule management of parts and sub-assemblies
- ✔ Interactive digital work instructions - operator, test, and repair
- ✔ Recipe management and coordination between machines
- ✔ Comprehensive Bill of Materials
- ✔ Verification of components and sub-assemblies
- ✔ Advanced barcode matching to validate lot, part, and serial numbers
- ✔ Purchased component inventory and line replenishment
- ✔ Pick-to-light and put-to-light material handling logic
- ✔ Report and improve OEE, downtime, scrap, and other production metrics
- ✔ Component and finished good label printing
- ✔ Produce and pack-out the correct parts to the correct containers
- ✔ Enhanced operator login and certification for safety and quality
- ✔ Links to other external systems such as part drawings and material specifications
- ✔ Defect and rework tracking, containment, and correction
- ✔ Sequencing within and between stations
- ✔ Engineering change management and tracking
- ✔ Direct connection to plant floor hardware

Move your company from separate islands of automation to delivering an integrated plant floor.
